## 4 groups

- Reform
- Without Calculus ( $\mathrm{N}=1808$ )
- With Calculus ( $\mathrm{N}=395$ )
- Traditional
- Without Calculus ( $\mathrm{N}=10,564$ )
- With Calculus ( $\mathrm{N}=4,669$ )

## Percentages Correct

|  | MBSC | ALG | TRG | Overall |
| :---: | :---: | :---: | :---: | :---: |
| Reform w/o Calc | .57 | .37 | .37 | .42 |
| Reform w/ Calc | .81 | .65 | .62 | .68 |
| Trad w/o Calc | .64 | .43 | .43 | .49 |
| Trad w/ Calc | .88 | .73 | .68 | .76 |

## Average Placement Scores

|  | MBSC | ALG | TRG |
| :---: | :---: | :---: | :---: |
| Reform w/o Calc | 455 | 446 | 448 |
| Reform w/ Calc | 620 | 592 | 585 |
| Trad w/o Calc | 498 | 477 | 479 |
| Trad w/ Calc | 672 | 643 | 620 |

- All Math Placement Scores have an average of 500 and a standard deviation of 100
- Traditional w/ Calc group scored 1.4 standard deviations (141 points) higher than Traditional w/o Calc.
- No noticeable difference in standard deviations across groups
- All approximately equal to 100.

## Percentages Placing at Each Level

Remedial Inter. Alg College Alg/Precalc Trig Calc

|  | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Reform w/ <br> $\mathbf{o}$ Calc | 18 | 11 | 14 | 17 | 18 | 6 | 2 | 7 | 7 |
| Reform w/ <br> Calc | 2 | 2 | 3 | 7 | 10 | 9 | 3 | 17 | 47 |

| Trad w/ <br> Calc | 0 | 1 | 1 | 3 | 7 | 7 | 2 | 19 | 61 |

Significantly higher percentage of calculus placements under Traditional w/ Calculus

## Purpose

- Purpose of this study is to better understand the relative strengths and weaknesses of different curricula with respect to specific math concepts measured by the placement test.

## Characterizing Item Performance

## Differential Item Functioning

- One of the measurement assumptions is that the item characteristic curve (ICC) is identical for different subgroups of examinees.
- When the ICC is different for different subgroups for the same item, the item is said to function differentially.
- ICCs may be plotted for different subgroups and the differences may be studied to form hypotheses about why and where differences exist.
- Here, we examined differences in math placement test characteristics between groups of examinees, based on the type of HS math curriculum they reported.

## Example of Typical Item Without DIF

## Differential Item Functioning

Item 70: Trigonometry Identities

## Design

- Estimated DIF curves for each of the 75 items on the test
- Examined the test content/test objectives for the items showing the most DIF
- Analyzed patterns of items showing DIF to identify sets of thematically similar items.
- Repeated a DIF analysis for each of these subgroups

## Simplify Questions

## Simplify Questions

prop

## Geometry of Triangles Questions

- Reform w/o Calc
- Reform w/ Calc
- Trad w/o Calc
- Trad w/ Calc

## Exponentials \& Logarithms Questions

## Trigonometry Identities Questions

## Trigonometry Identities Questions

prop
. 29
. 52

## Understanding Trig Questions

## Functions Questions

## Advanced Algebra Questions

## Summary

- Generally only very small differences between comparable Traditional and Reform groups, after accounting for overall achievement differences
- Implication is that MPT is fair as a tool for assessing undergraduate math readiness, regardless of HS curriculum.
 and within each of the three subscores.
- Reform w/ Calc versus Reform w/o Calc showed biggest differences
- Exp. \& Log
- Trig Identities
- Functions
- Advanced Algebra

## Case Study: Nekoosa High School Study

- Study examined the change over time in
- ACT-Math scores
- UW Math Placement Test scores
- Math Basics, Algebra, Trigonometry
- Actual math placements (using UW-SP math algorithm)
- Remedial Math
- Intermediate Algebra
- College Algebra / Trigonometry
- Calculus

## Participants

- Nekoosa High School students who
- graduated between 1998 and 2007
- graduated in the top 50 of their HS class
- subsequently took the UW Math Placement Test
- 283 of the 500 students (56.6\%) met the eligibility criteria
- Annual sample sizes: 25-32

## Curricula Studied

- Graduating years

1998-2001

- Purely traditional math
- Introductory algebra through pre-calculus

2002-2003

- Dual track, including both traditional math and Core Plus math 2004-2007
- Purely Core Plus math
- CORE I through CORE IV
- AP-Calculus was adopted by school for 2000-01 school year
- Available to a few traditional kids, but mostly CORE Plus students

| N | 96 | 18 | 114 | 159 | 7 | 168 |

## Percentages of Students Placing at Each Level and Average ACT-M Scores by Math Curriculum

| Level | Math Curriculum |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | CORE Plus Math |  |  | Traditional Math |  |  |
|  | No Calc | AP Calc | Total | No Calc | AP Calc | Total |
| 1 | 33.3 | 5.6 | 28.9 | 9.4 | 0.0 | 9.0 |
| 2 | 10.5 | 0.0 | 8.8 | 11.3 | 0.0 | 10.8 |
| 3 | 53.1 | 55.6 | 53.5 | 54.7 | 14.3 | 53.0 |
| 4 | 3.1 | 38.9 | 8.8 | 24.5 | 85.7 | 27.1 |
| ACT- | 20.0 | 24.7 | 20.8 | 23.3 | 30.3 | 23.6 |
| N | 96 | 18 | 114 | 159 | 7 | 168 |

## Major Findings

- CORE-Plus students performed significantly less well on math placement test and ACT-M than did traditional students
- Change in performance was observed immediately after switch
- Score trends throughout CORE-Plus years actually decreased slightly
- Inconsistent with a teacher learning-curve hypothesis
- CORE-AP students fared much better, but not as well as the traditional-AP students
- Both sample sizes were low

## Limitations / Alternative Explanations

- Placement Test Scores and Placement Algorithms changed in 2002.
- To the extent that old and new scores/algorithms behave differently, interpretations are clouded
- We conducted a study to estimate the new scores from the old scores (for students who tested before 2002).
- Allowed a single placement algorithm to be used for all students
- Reasons for Confidence in Findings
- Old and new scores were highly correlated
- Re-analysis provided results that mirrored exactly those from original study
- ACT-M scores revealed same pattern as placement test scores

## Limitations / Alternative Explanations

- Teacher Variables
- Staffing changes
- Teacher experience/quality
- Familiarity with CORE-Plus
- Student Variables
- How much and when was math taken
- 4-years of math: 79\% CORE-Plus, 77\% Traditional
- Can't control for quality of student who attended a UW campus
- School Variables
- Declining enrollment
- Slightly easier to rank in top 50 during CORE Plus years
- Incoming quality and the effect of middle-school curricula
- Changing demographics

## Data Availability for Other Districts

- The Center for Placement Testing has begun to provide placement data to schools/districts (for most recent year) on a request basis
- Resources for collaborations on a larger study are limited, but will be offered as possible
- Please ask

## Information Exchange

- Schools / Districts will need to provide the Center with an electronic file (ASCII or Excel) containing
- Merge information
- Students' (legal) names
- Birthdates
- Any other information to analyze
- Highest math course
- Years of language study
- Class rank
- Center will provide
- Summary statistics
- Number of students testing, average score, and standard deviation
- Histogram of placement scores (or subscores for math)
- Table of placement decisions
- Placement score breakdowns for extra information
