

2012 KIDS COUNT

IN NEW MEXICO

NEW MEXICO
VOICES
FOR CHILDREN

NM Voices for Children 2012 Children's Charter:
Our Vision for the Next Generation

1. All children and their families are economically secure.
2. All children and their families have a high-quality cradle-to-career system of care and education.
3. All children and their families have quality health care and supportive health programs.
4. All children and their families are free from discrimination based on race, ethnicity, religion, disability, gender, sexual orientation, or country of origin.
5. All children and their families live in safe and supportive communities.
6. All children and their families' interests and needs are adequately represented in all levels of government through effective civic participation and protection of voters' rights.
7. All children and their families' needs are a high priority in local, state, and federal budgets and benefit from a tax system that is fair, transparent, and that generates sufficient revenues.

Our mission is to champion public policies that improve the status and well-being of New Mexico's children, families, and communities in the areas of health, education, and economic security through credible research and effective advocacy.

ACKNOWLEDGEMENTS

Production of New Mexico Voices for Children's annual KIDS COUNT data book would not be possible without the generous support of the Annie E. Casey Foundation and other donors. Other contributors to this year's publication include: Eric Griego, Firestik Studio, and Ms. Print. Several key staff members from New Mexico Voices for Children provided essential data analysis, input, feedback and support, including: Gerry Bradley, Research Director, Kwaku Sraha, Finance Manager; Amber Wallin, SFAI Policy Fellow; Juliet Yazzie, Administrator; and Alicia Manzano, Outreach Director.

New Mexico KIDS COUNT Data Book

A Profile of the Well-Being
of Our State's Children

New Mexico Voices for Children is pleased to present the *2012 New Mexico KIDS COUNT Data Book*. This report provides the most up-to-date, reliable data that show how New Mexico children and their families fare economically, academically, socially, and with regard to their health. This is the 20th year in which we have published the annual KIDS COUNT Data Book. Our intent is to provide decision-makers at the state, tribal, and local levels with the information they need to promote and support children's interests and family economic security.

Every year the Annie E. Casey Foundation releases the national KIDS COUNT data book. New Mexico has not fared well when ranked against the other 49 states. Every year for the last two decades, New Mexico has ranked in the bottom ten—and often in the bottom five—of states with regard to child well-being. In 2012, the national KIDS COUNT program revised its respected indicators of child

well-being in order to provide a more complete picture of child well-being. This comprehensive index is organized into four domains and uses indicators that very accurately predict children's future success. In general, our state's status has *not* improved with the use of these revised indicators. The 16 indicators are listed at right, with New Mexico's statistics and ranking among the 50 states:

NEW MEXICO RATES AND RANKINGS IN THE 2012 NATIONAL KIDS COUNT DATA BOOK

| Indicator by Category | New Mexico Rate | New Mexico State Rank |
|--|-----------------|-----------------------|
| Overall Rank | | 49 |
| Economic Well-Being | | |
| Children in Poverty (2010) | 30% | 49 |
| Children Whose Parents Lack Secure Employment (2010) | 37% | 43 |
| Children Living in Households with a High Housing Cost Burden (2010) | 33% | 15 |
| Teens (Ages 16-19) Not in School and Not Working (2010) | 12% | 42 |
| Education | | |
| Children Not Attending Preschool (2008-2010) | 62% | 44 |
| Fourth Graders Not Proficient in Reading (2011) | 79% | 50 |
| Eighth Graders Not Proficient in Math (2011) | 76% | 45 |
| High School Students Not Graduating on Time (2008-2009) | 35% | 48 |
| Health | | |
| Low-Birth Weight Babies (2009) | 8.3% | 25 |
| Children without Health Insurance (2010) | 10% | 39 |
| Child and Teen Deaths per 100,000 (2009) | 40 | 44 |
| Teens Who Abuse Alcohol or Drugs (2008-2009) | 10% | 48 |
| Family and Community | | |
| Children in Single-Parent Families (2010) | 42% | 47 |
| Children in Families Where Household Head Lacks a High School Diploma (2010) | 20% | 47 |
| Children Living in High-Poverty Areas (2006-2010) | 20% | 49 |
| Teen (Ages 15-19) Births per 1,000 (2009) | 64 | 49 |

Source: KIDS COUNT Data Book, 2012: State Trends in Child Well-Being; The Annie E. Casey Foundation

SUMMARY AND MEANING OF NEW MEXICO'S DATA

Demographics: New Mexico's population now stands at over two million, and more than a quarter (28 percent) of our population is under the age of 20. The most populous counties are Bernalillo, Doña Ana, Santa Fe, Sandoval, and San Juan. The state continues to maintain its majority-minority status, with 46 percent of the population being Hispanic, 41 percent non-Hispanic white, 9 percent Native American, and 6 percent African-American, Asian, or mixed/other race. Counties in which Hispanics make up the largest share of the population include Mora, San Miguel, Guadalupe, Rio Arriba, Doña Ana,

and Luna. McKinley, Cibola, and San Juan counties have majority Native American populations. Among children and youth ages 0 to 19, the racial/ethnic breakdown also reflects the majority-minority status: 48 percent are Hispanic, 23 percent are non-Hispanic white, 10 percent are Native American, and 19 percent are African-American, Asian, or mixed/other race.

Family and Community: The number of children living in single-parent households in New Mexico is a troubling indicator. Family structure is swiftly changing. At the national level, the percent of children living with married parents dropped steadily from the 1970s to the early 2000s, when

“Youth employment is at its lowest level since World War II,” said the 2012 *Youth and Work Policy Report* by KIDS COUNT, the Annie E. Casey Foundation. In New Mexico, only 25 percent of those 16 to 19 years old, and just 59 percent of those 20 to 24 are employed. Why is this a problem? Youth who don’t gain early work experience—who are neither in school nor in the workforce—face chronic under- or unemployment and are failing to build the skills needed for a solid career in the 21st century. There are fewer jobs today, recovery from the recession is very slow, and employers require higher levels of skills and experience than can be gained just from high school. NOW is the time for a comprehensive, multi-faceted and multi-system approach to provide our young people with multiple pathways—education, training, community service and early employment opportunities, support, and networking services—to meet their needs, build their talents, and prepare them for today’s workforce.

it held steady, then dropped again by 2010.¹ In New Mexico, approximately 42 percent of children now live with single parents and 29 percent of families are headed by single mothers.

More than half of the children in four counties—Cibola (62 percent), McKinley (56 percent), San Miguel (54 percent), and Rio Arriba (53 percent)—live in families headed by single mothers. In three of these counties—McKinley, Cibola, and Rio Arriba—the birth rates for single mothers are also higher than the state rate (7 births per 1000 women). Research shows that single-parent families tend to have lower incomes and assets, and that children in these families are at greater risk for behavioral and health problems, as well as for lower educational attainment. As New Mexico’s economy slowly recovers from the recession, single-parent families

will need support to weather this lengthy period of economic strain.

The term “place” refers to where people live, play, work, go to school, and interact with others and, as such, place has a great impact on children’s health, well-being, and future. Unfortunately, fully one fifth of New Mexico’s children live in areas of concentrated poverty. (Places of concentrated poverty are areas in which 30 percent of the population lives in poverty and where community resources are scarce or of low-quality.) Only one other state has a lower ranking than New Mexico on this important measure. It is alarming that in four counties—McKinley (67 percent), Luna (62 percent), Curry (45 percent), and Doña Ana (44 percent)—the rates of children living in high-poverty areas are even higher than that of the state as a whole.

Studies from around the world show the importance of parents' (especially mothers'), level of educational attainment to the future well-being of their children. In general, the higher the educational attainment of parents, the better a child will do in life. It is disconcerting to note, therefore, that New Mexico ranks very low, 47th among the states, with a proportion of its children (20 percent) living in families in which the household head lacks a high school diploma. In addition, 36 percent of the state's families that live in poverty are headed by a non-high school graduate. Noting again the importance of "place" in children's development, few children in New Mexico are growing up in places where many adults—potential role models—have a bachelor's degree or higher. New Mexico's adults, age 25 and above, have fairly low levels of educational attainment; only 11 percent have a graduate-level degree, and only 15 percent have a bachelor's degree. It is also disturbing that so many students—up to 28 percent in some counties—enroll in college but never graduate.

Education: Education is a key ingredient in today's recipe for social and economic success in the 21st century. Regrettably, too many of New Mexico's children, from the earliest years, are on the wrong trajectory in terms of realizing academic and economic success. Extensive scientific, educational, and economic research has shown that it is in the earliest years of life, from birth to age 5, that the most important and extensive brain development takes place. Early learning experiences during this time mold the neurological circuitry and architecture of the maturing brain. These experiences, including interactions with parents and other adults, build either a sturdy or fragile foundation for a child's cognitive, emotional, social, and behavioral capacity.

High-quality early childhood care and education (ECE) include services like pre-natal care, home visiting/parent mentoring, licensed child care (including child care assistance for low-income parents), and high-quality preschool programs.

These services are essential to the positive learning and brain development of our infants and toddlers, and preschool can help prepare them to do better in grades K-12. But only about 40 percent—less than half—of New Mexico's 3- and 4-year-olds are enrolled in preschool programs. In some counties, notably Valencia, only about one in four children attend preschool. Besides access, however, the *quality* of preschool (and other ECE programs) is also very important but quite often lacking. In Luna County, for example, which has one of the best preschool enrollment rates (64 percent), school administrators still note that too many of their new kindergarten students are not prepared for school when they start.²

Significant evidence exists showing that children's participation in high-quality, comprehensive ECE programs helps lead to improved academic progress and performance. In New Mexico, where most children do not attend preschool, the consequences can be seen as early as 3rd grade in reading proficiency scores. (Reading proficiency by 4th grade is considered a "make-or-break benchmark" for whether a child will succeed in school and in life. This is because children "learn how to read" through 3rd grade. In 4th grade and beyond, they must "read to learn," i.e. use their reading skills to learn other subjects like math and science.³) A student who is not proficient in reading by 4th grade may find subsequent educational content extremely difficult to read. This leads to frustration as these children fall behind other students in school performance. Such students often face potential grade retention, and may develop social and behavioral problems. Children who are not proficient readers by 4th grade are more likely to drop out and/or not graduate from high school.⁴

The national KIDS COUNT Program, using the National Assessment for Educational Progress (NAEP), a standardized test that allows comparability of reading scores across states, ranks New Mexico

50th—dead last—among the states in 4th grade reading proficiency. Only about 20 percent—just two out of every ten New Mexico 4th graders—can read at a proficient level. If we consider the results from New Mexico’s own 3rd grade reading proficiency test, the results are not any more encouraging. While in six school districts as many as 70 percent to 80 percent of 3rd graders score at a “proficient and above” level, in too many others—more than one-third of our public school districts—only 50 percent or less of the 3rd graders read proficiently or above. This does not bode well for many students’ potential to succeed as they progress into higher grade levels. This concern seems justified when we consider the low math proficiency rates of New Mexico’s 8th graders. In only 11 out of the state’s 89 public school districts do 60 percent or more of the 8th graders score at a “proficient or above” level. In two-thirds (60) of the school districts less than half the students can do math at the required level. Given that skill in mathematics is considered vital for 21st century technical jobs, low proficiency in mathematics is alarming in its implications for New Mexico’s future workforce capacity.

These low proficiency scores have an effect on the state’s high school graduation rate. A 2012 report from the U.S. Department of Education ranked only one state lower than New Mexico in terms of the on-time high school graduation rate.⁵ The state’s graduation rate, 63 percent (only 56 percent for economically disadvantaged students), means that more than one-third (37 percent) of our youth do not graduate from high school within four years. There are better performance rates, however. Some public school districts—most of them in small communities—have graduation rates of 90 percent and above.

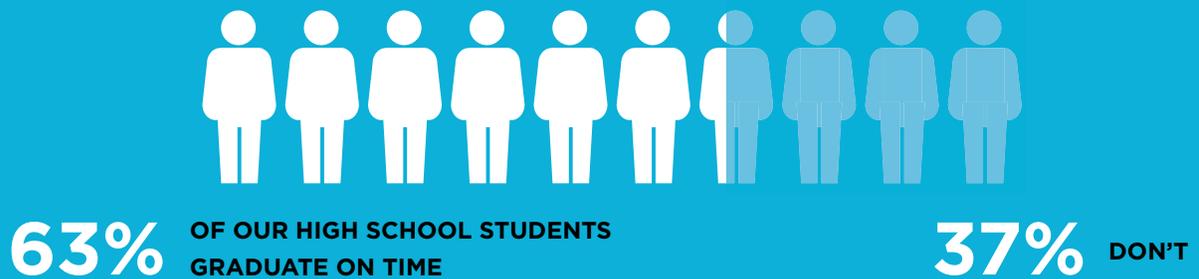

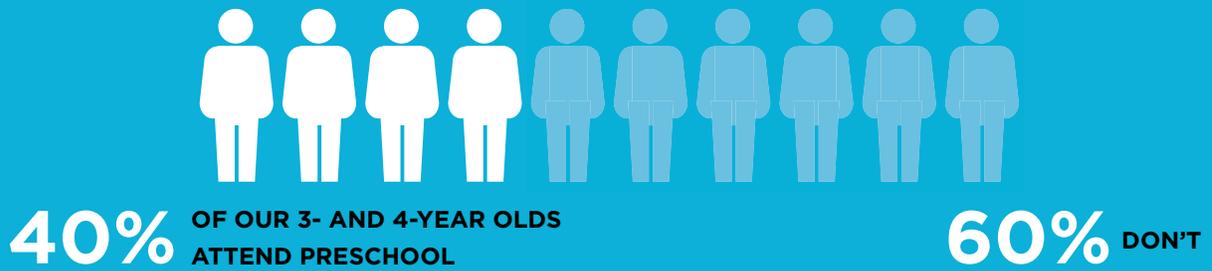

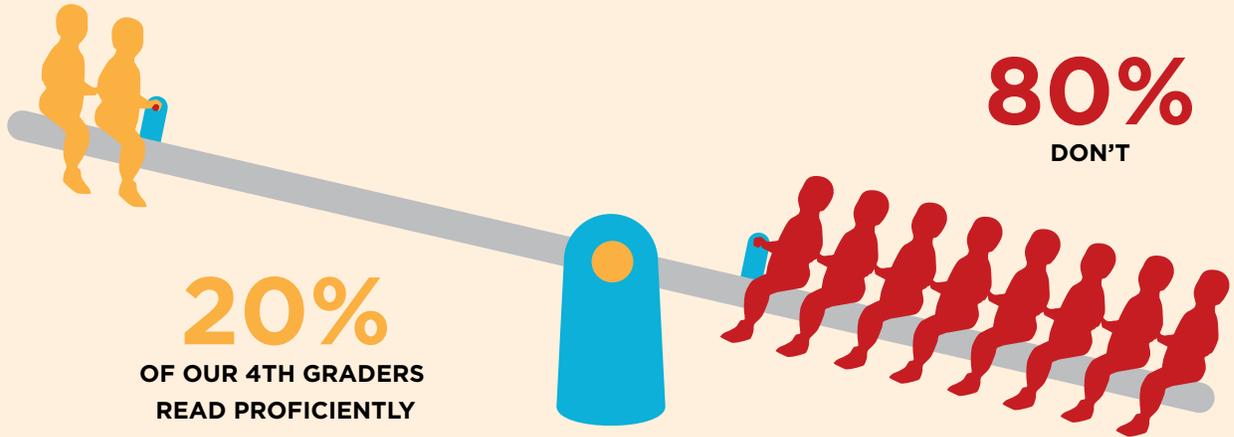

Economic Well-Being: Many of these educational indicators appear to contribute to the high proportion of New Mexico teens, ages 16 to 19, who are not in school and not working. Roughly 12 percent of these

teens, often referred to as “disconnected” youth, are missing out on either early work experiences or higher education that will provide them with the pathways to more highly-paid careers, and/or protect them from chronic unemployment. (See box, page 6.) In New Mexico, teens in this age group who do not have a high school diploma are more likely to fall into this “disconnected” youth category.

New Mexico families, especially those with children, are still struggling with the aftermath of the recession and the slow economic recovery. Always considered one of the “poor” states in the nation, New Mexico’s median household income, at \$43,715, is more than \$7,000 less than the national median. The number of families considered “middle class” is shrinking as families struggle to stay above poverty, provide adequate nutrition for their children, pay expensive medical costs, and hold onto homes and employment. Currently, New Mexico ranks 49th among the states in the percent of children living in poverty—close to one-third of our state’s children live below the poverty level. In some counties, the rate is even higher than that. In Luna County, more than half of the children under age 18 live in poverty, and two out of every five children in Taos County are poor. One indicator of poverty is that two-thirds of students in New Mexico schools are eligible for free and reduced-price lunch and breakfast. In some public school districts, 90 percent or more of the students are eligible for free or reduced-price meals.

A marker of how much the lingering recession impacts families is the fact that more than one-third (37 percent) of the state’s children live in families in which no parent has full-time, year-round employment. Counties with particularly high rates of families where parents lack secure employment include Grant and San Miguel (31 percent each), and Cibola and Rio Arriba (29 percent each). Another sign that families with children are under financial stress is the increased percentage of households receiving SNAP benefits (formerly known as “food stamps”).

New Mexico's Educational Outcomes are Unbalanced

The state's rate of enrollment has grown from 11 percent to 13 percent (2008-2011), and in some counties, like Luna, as many as one in five families receives SNAP.

An additional measure of family economic security is the extent to which households have financial assets and resources—such as savings, interest from investments, and rental income—to help them weather a catastrophic financial event. These events can include the loss of a job, crushing medical debt, or even a recession. In this state, less than one in five households has these types of assets to fall back on. A greater percent of families with investment and rental income live in Santa Fe, Lincoln, and Grant counties, while less than one in ten households in Cibola, McKinley, and San Miguel counties has these resources.

In New Mexico, a large number of households also struggle with high housing costs; that is, they pay more than 30 percent of their income for rent or on a mortgage. Approximately 65 percent of New Mexico households are shouldering high housing costs, and one-third of the state's children live in these households. This means that these families have less money to pay for food, clothing, utilities, and other essentials that ensure the health and well-being of their offspring.

Health: All of the factors described above have an impact on children's physical and emotional health and well-being. One major means of promoting children's health—one that is keenly influenced by policy decisions—is health insurance coverage for young people, especially those living in poor and low-income families. With insurance coverage, children are more likely to get the preventive visits, immunizations, developmental checks, and care needed to keep them on a positive trajectory of physical, intellectual, and emotional growth. In New Mexico, approximately 14 percent of children under age 18 do not have health insurance of any kind, and of the 86 percent of children who do have insurance,

46 percent are covered by Medicaid.⁶ Over half (52 percent) of New Mexico's children under age 19 are living in poverty-level and low-income families.⁷ It is clear that Medicaid, which covers about 337,000 kids under age 21, is of crucial importance to the health of our youth. Medicaid must be sustained and all eligible children enrolled.

Other KIDS COUNT indicators that highlight the health status of New Mexico adolescents show that there is room for concern: New Mexico ranks 48th among the states in the proportion of teens who abuse alcohol and drugs. According to data from the state's Department of Health and the Youth Risk and Resiliency Survey, one in four of the state's high school students use illicit drugs and/or engages in binge drinking. (Binge drinking is defined by the YRRS as having five or more drinks of alcohol in a row, within a couple of hours, on one or more of the past 30 days.) In some of our state's counties the rates of teens reporting they binge drink are even more alarming: 42 percent in Union County; 38 percent in Santa Fe and Mora counties; and 37 percent in Sierra and Taos counties. Alcohol and drug use may also be factors in the high teen death rates in the state—59 per 100,000 teens.

In addition, New Mexico continues to have the second highest rate of teen (ages 15-19) births, especially among Hispanics and Native Americans. Although the state's teen birth rate appears to be slowly decreasing, we continue to have higher rates than most other states. Children born to teens are at much greater risk of being trapped in the cycle of family poverty, having poor educational achievement, engaging in criminal behavior, and becoming teen parents themselves.

TAKING ACTION

New Mexico does not have comprehensive policies that provide all children in our state access to the opportunities that promote progress and allow youth to reach their full potential. The research

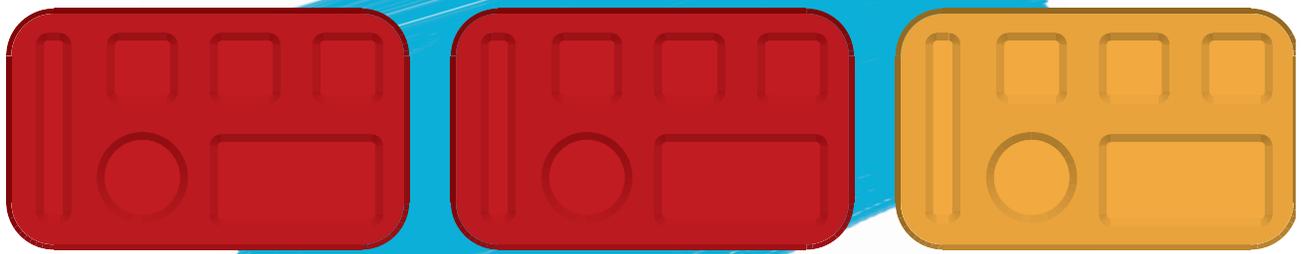

exists that can guide us to develop and implement policies that promote and support children and families, from (and before) birth through adolescence. New Mexico needs to move from knowledge to practice.

State government should support and fund a comprehensive, high-quality early childhood care and education system of services. These services include prenatal care and home visiting programs, high-quality child care, and preschool. Such programs will do much to improve the well-being of New Mexico's children, giving infants and toddlers the best start during the most critical developmental stage of their lives and ensuring that children are reading by third grade and will have the necessary foundation for a successful path to high school graduation and college/career readiness. We also need to provide greater access to education and training opportunities to adults in our communities. We know that the increased educational attainment levels of the adults (parents) in our state will result in improved educational outcomes for our children. We must also ensure that children and families have adequate access to health care and insurance. Providing funding that supports child and youth development across education, health, workforce development, and other systems is needed. Policymakers should require accountability by linking program funding to meaningful outcomes and continue or eliminate programs based on their effectiveness.

State and local policymakers need to make use of credible data in considering the potential impact of budgetary and policy decisions. The data and information on the current status of child and family well-being provided in this 2012 New Mexico KIDS COUNT Data Book are meant to be of use to decision-makers in taking meaningful steps to address and reduce the adverse economic, social, and educational factors impeding our children's prospects for future success.

Tables and Graphs: Population and Economic Data

“One indicator of poverty is that two-thirds of students in New Mexico schools are eligible for free and reduced-price lunch and breakfast. In some public school districts, 90 percent or more of the students are eligible for free or reduced-price meals.”

TABLE I: TOTAL (ALL AGES) AND CHILD (AGES 0-19) POPULATION BY COUNTY (2010-2011)

Note: These are population estimates, based on data from July 1, 2010 to July 1, 2011.

“In New Mexico, approximately 42 percent of children now live with single parents. This is a troubling indicator.”

| Location | Total Population (All Ages) | Total Child Population (Ages 0-19) |
|-------------------|-----------------------------|------------------------------------|

TABLE III: PERCENT OF CHILDREN IN SINGLE-PARENT FAMILIES BY COUNTY (2011)

| Location | 2011 |
|-------------------|------|
| United States | 34% |
| New Mexico | 42%* |
| Bernalillo County | 41% |
| Chaves County | 41% |
| Cibola County | 62% |
| Curry County | 35% |
| Doña Ana County | 42% |
| Eddy County | 35% |
| Grant County | 40% |
| Lea County | 31% |
| Lincoln County | 42% |
| Luna County | 48% |
| McKinley County | 56% |
| Otero County | 38% |
| Rio Arriba County | 53% |
| Roosevelt County | 32% |
| San Juan County | 43% |
| San Miguel County | 54% |
| Sandoval County | 41% |
| Santa Fe County | 38% |
| Taos County | 47% |
| Valencia County | 38% |

Note: The numerator is the number of children in single parent families, divided by the total number of children living with families.

*This reads as: "Of all children living with their families in New Mexico, 42 percent live in households headed by a single parent."

Source: U.S. Census, American Community Survey, 2009-2011, Table C23008

TABLE IV: MEDIAN HOUSEHOLD INCOME BY COUNTY (2010-2011)

| Location | 2010 Income | 2011 Income |
|-------------------|-------------|-------------|
| United States | \$51,222 | \$51,484 |
| New Mexico | \$43,830 | \$43,715 |
| Bernalillo County | \$47,394 | \$47,103 |
| Chaves County | \$35,259 | \$36,662 |
| Cibola County | \$34,916 | \$36,219 |
| Curry County | \$38,996 | \$38,695 |
| Doña Ana County | \$35,869 | \$36,278 |
| Eddy County | \$47,630 | \$46,871 |
| Grant County | \$38,860 | \$37,386 |
| Lea County | NA | \$46,029 |
| Lincoln County | \$42,448 | \$42,632 |
| Luna County | \$28,935 | \$30,768 |
| McKinley County | \$30,403 | \$31,417 |
| Otero County | \$37,342 | \$36,834 |
| Rio Arriba County | \$40,737 | \$40,366 |
| Roosevelt County | \$39,336 | \$39,369 |
| San Juan County | \$47,019 | \$48,943 |
| San Miguel County | \$29,686 | \$30,663 |
| Sandoval County | \$57,054 | \$56,545 |
| Santa Fe County | \$52,045 | \$51,674 |
| Taos County | \$33,186 | \$33,660 |
| Valencia County | \$42,204 | \$42,465 |

The median (middle) household income in New Mexico continues to be lower than that of the U.S.

| Valencia County | 21% | 34% | 24% | 36% |

The national KIDS COUNT program ranks New Mexico as 49th in the nation in terms of its high rate of child poverty. While almost one in three children in the state live in poverty, at least 11 counties have rates that are much higher than that of the state.

Source: 2009-2011 American Community Survey, Table B17001

TABLE VI: PERCENT OF FAMILIES WITH CHILDREN (UNDER AGE 18) LIVING IN POVERTY BY FAMILY TYPE AND COUNTY (2009-2011)

| Location | Total Families in Poverty | Married Couple Families in Poverty | Single Male Householder Families in Poverty | Single Female Householder Families in Poverty |
|-------------------|---------------------------|------------------------------------|---|---|
| United States | 11% | 3% | 1% | 5% |

| Taos County | 17% | 3% | 2% | 7% |
| Valencia County | 19% | 6% | 3% | 7% |

New Mexico continues to have a high proportion of its families living in poverty. The state also has a high percent of its children living in single-parent households, which often have access to fewer resources and/or assets than married-couple families to promote their children's well-being.

Note: Poverty rates for families with children are not comparable with overall child poverty rates for several reasons: families may include more than one child and children live in situations that do not fall within these three presented categories of households (i.e. they may live with a grandparent or someone not a relative).

*This reads as: "Of all families with children under age 18 in New Mexico, 6 percent were headed by a single-female parent whose income was below the federal poverty level."

Source: U.S. Census, 2009-2011 American Community Survey, Table C17010

TABLE VII: PERCENT OF CHILDREN LIVING IN AREAS OF CONCENTRATED POVERTY BY COUNTY (2006-2010)

| Location | 2006-2010 |
|-------------------|-----------|
| United States | 11% |
| New Mexico | 20% |
| Bernalillo County | 13% |
| Catron County | 0% |
| Chaves County | 19% |
| Cibola County | 7% |
| Colfax County | 0% |
| Curry County | 45% |
| De Baca County | 0% |
| Doña Ana County | 44% |
| Eddy County | 0% |
| Grant County | 0% |
| Guadalupe County | 0% |
| Harding County | 0% |
| Hidalgo County | 0% |
| Lea County | 12% |
| Lincoln County | 0% |
| Los Alamos County | 0% |
| Luna County | 62% |
| McKinley County | 67% |
| Mora County | 0% |
| Otero County | 31% |
| Quay County | 29% |
| Rio Arriba County | 0% |
| Roosevelt County | 26% |
| San Juan County | 26% |
| San Miguel County | 24% |
| Sandoval County | 2% |
| Santa Fe County | 8% |
| Sierra County | 0% |
| Socorro County | 12% |
| Taos County | 0% |
| Torrance County | 0% |
| Union County | 0% |
| Valencia County | 13% |

One in five children in New Mexico live in areas of concentrated poverty—that is, they live in communities in which 30 percent or more of the population lives in poverty. This means that even middle-class and/or high-income families with children may live in these areas, and suffer from the lack of resources. This indicator is different from the “child poverty” indicator, which is based on the level of income for the family of the child.

Note: Data analysis of census tract rates of poverty were prepared by the Population Reference Bureau for the national KIDS COUNT program to get these estimates of concentrated poverty at the county level. Those counties with a 0 percent rate of children living in areas of concentrated poverty did not have any census tracts with a 30 percent or higher rate of poverty.

Source: U.S. American Community Survey, 2006-2010, with data analysis done by KIDS COUNT

TABLE VIII: PERCENT OF FAMILIES IN WHICH NO PARENT HAD FULL-TIME, YEAR-ROUND EMPLOYMENT BY COUNTY (2011)

| Location | Families Below Poverty Level | Families At or Above Poverty Level |
|-------------------|------------------------------|------------------------------------|
| United States | 40% | 16% |
| New Mexico | 38%* | 18%** |
| Bernalillo County | 39% | 16% |
| Chaves County | 25% | 17% |
| Cibola County | 38% | 26% |
| Curry County | 25% | 13% |
| Doña Ana County | 33% | 19% |
| Eddy County | 25% | 15% |
| Grant County | 47% | 29% |
| Lea County | 40% | 15% |
| Luna County | 28% | 27% |
| McKinley County | 58% | 18% |
| Otero County | 30% | 23% |
| Rio Arriba County | 67% | 21% |
| Roosevelt County | 25% | 17% |
| San Juan County | 53% | 14% |
| San Miguel County | 48% | 27% |
| Sandoval County | 41% | 17% |
| Santa Fe County | 27% | 17% |
| Taos County | 27% | 22% |
| Valencia County | 36% | 21% |

This table presents data by families in which no parent had secure employment. However, since 2008, New Mexico has also seen a rise in the percent of children whose parents lack secure employment—from 30 percent in 2008, to 37 percent in 2010—an indication that the consequences of the recession are still affecting the well-being of children in our state.

*This reads as: "Of all New Mexico families living in poverty, 38 percent were families in which no parent had full-time, year-round employment."

**This reads as: "Of all New Mexico families at or above poverty level, 18 percent were families in which no parent had full-time, year-round employment."

Source: 2009-2011 American Community Survey, Table B17016

TABLE IX: PERCENT OF HOUSEHOLDS RECEIVING SNAP BY COUNTY (2008-2011)

| Location | 2008-2010 | 2009-2011 |
|-------------------|-----------|-----------|
| United States | 10% | 12% |
| New Mexico | 11% | 13% |
| Bernalillo County | 9% | 12% |
| Chaves County | 16% | 16% |
| Cibola County | 14% | 18% |
| Curry County | 18% | 17% |
| Doña Ana County | 14% | 17% |
| Eddy County | 14% | 14% |
| Grant County | 9% | 12% |
| Lea County | 11% | 13% |
| Lincoln County | 12% | 13% |
| Luna County | 17% | 20% |
| McKinley County | 13% | 17% |
| Otero County | 12% | 16% |
| Rio Arriba County | 11% | 13% |
| Roosevelt County | 11% | 11% |
| San Juan County | 8% | 9% |
| San Miguel County | 12% | 14% |
| Sandoval County | 9% | 11% |
| Santa Fe County | 8% | 9% |
| Taos County | 14% | 14% |
| Valencia County | 16% | 19% |

A recent study (November 2012) by Hoynes, H., Schanzenbach, D. & Almond, D. finds that "access to food stamps [SNAP program] in childhood leads to a significant reduction in the incidence of obesity, high blood pressure, and diabetes," even decades after originally utilized.

Tables and Graphs:

Education Data

“Learning experiences during the first five years of life mold the neurological circuitry and architecture of the maturing brain, building either a sturdy or fragile foundation for a child’s cognitive, emotional, social, and behavioral capacity.”

“In general, the higher the educational attainment of parents, the better a child will do in life. New Mexico ranks 47th among the states for the high proportion of its children (20 percent) living in families in which the household head lacks a high school diploma.”

TABLE XII: PERCENT OF CHILDREN (AGES 3-4) ATTENDING PRESCHOOL BY COUNTY (2009-2011)

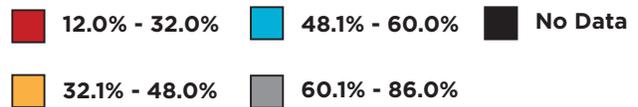

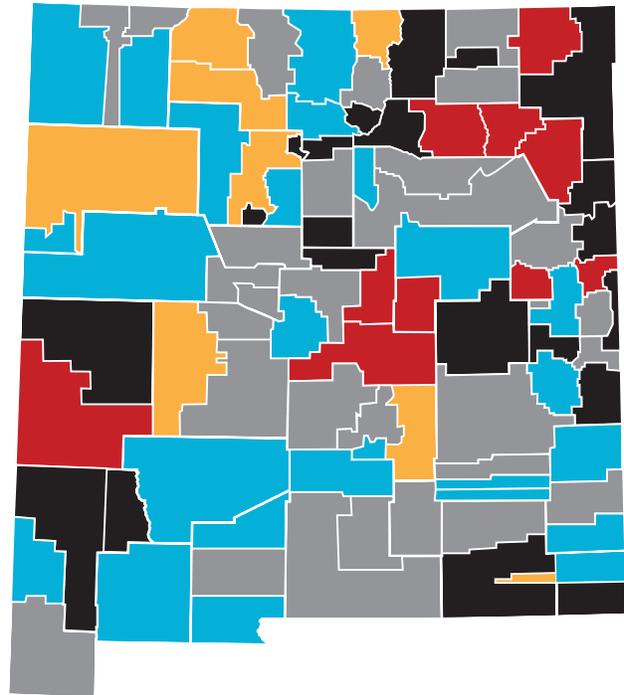

MAP I: PERCENT OF STUDENTS ELIGIBLE FOR FREE/REDUCED-PRICE LUNCH BY SCHOOL DISTRICT (2011-2012)

Of more than 340,000 students enrolled in New Mexico school districts, almost two-thirds (66 percent) are eligible for free and/or reduced-price breakfast and lunch programs. This indicator gives a clear idea of how many students are in low-income families—a factor that tends to have adverse effects on educational outcomes.

Reading proficiency by the end of 3rd grade is considered a vital step in a child's educational development. Up to 4th grade, children "learn to read," while after this, they must "read to learn," using their reading skills to understand other subjects. Studies show that children who cannot read proficiently by 4th grade are more likely

to have higher rates of grade retention, more behavioral and social problems, and a lower likelihood of graduating high school. New Mexico currently ranks last among all states on this important national indicator ("Early Warning! Why Reading by the End of Third Grade Matters", The Annie E. Casey Foundation).

A 2012 U.S. Department of Education report has ranked only one state (Nevada) as having a worse high school graduation rate than New Mexico. It is estimated that each student who does not graduate costs American society approximately \$260,000 in lost wages, taxes, and productivity. Given that New Mexico also has one of the highest rates of youth ages 16 to 19 not in school and not working, this is an indicator of great concern with regard to the state's ability to train a workforce capable of handling future job needs.

Note: Dropout rates are not related to cohort on-time graduation rates, so the percentages do not add up to 100%. The term “dropout” relates to something different from a “non-graduate,” so the rates are not complementary. Also, unlike graduation rates, dropout rates are calculated each year.

Sources: NM Public Education Department, 4-Year Graduation Rates, Cohort of 2011 at: http://ped.state.nm.us/Graduation/2012/Webfiles%20Graduation%20Cohort%20of%202011%20-%204%20Year_2012-05-04_1120.pdf; NM Public Education Department, 2010-2011 Dropout Report at: <http://www.ped.state.nm.us/IT/schoolFactSheets.html>

TABLE XVI: PERCENT OF TEENS (AGES 16-19) BY SCHOOL ENROLLMENT AND/OR WORKING STATUS BY COUNTY (2009-2011)

| Location | MALES | | | FEMALES | | |

| Valencia County | 75% | 6% | 12% | 80% | 4% | 10% |

Currently, youth employment is at its lowest level since World War II, a situation that makes it very difficult for young people trying to earn a degree, get a job, start a family, and make their own way financially. In New Mexico, only one-quarter of youth ages 16 to 19 are employed, and roughly 12 percent of this age group are not in school and not working. As youth who miss out on early work experiences are more likely to suffer chronic un- or underemployment, this is a concerning indicator in our state.

Note: The rows do not total 100 percent because the categories “enrolled in school, employed,” and “not enrolled in school, employed” were not included.

*This reads as: “80 percent of all male 16- to 19-year-olds in New Mexico are enrolled in school.”

**This reads as: “5 percent of all male 16- to 19-year-olds in New Mexico are high school graduates, are not in school, and are not working.”

| Taos County | 13% | 32% |
| Valencia County | 16% | 35% |

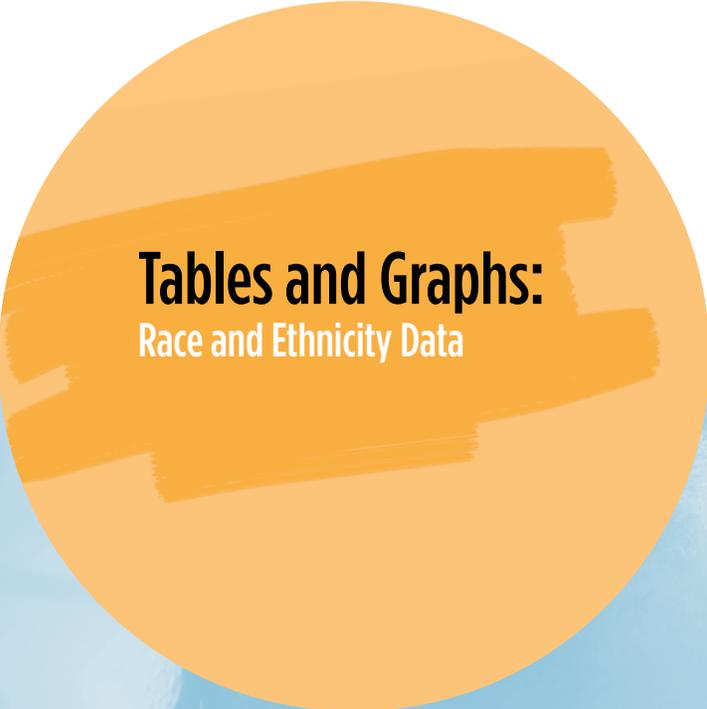

In general, those who do not have a high school diploma, will have higher rates of unemployment and find it more difficult to get and keep jobs with high pay and benefits. The lack of a well-educated workforce has a negative impact on the long-term

economic health of a state, and is one of New Mexico's major challenges. This table indicates the high percentage of families in poverty in which the head of the household has less than a high school education.

*This reads as: "16 percent of all families in New Mexico have a head of household with less than a high school diploma."

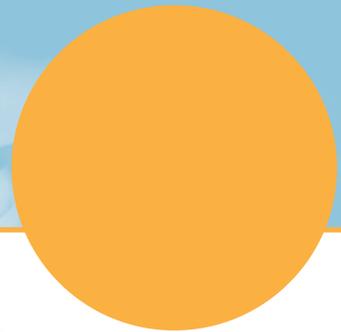

**This reads as: "36 percent of families living in poverty have a head of household who has less than a high school diploma."

Source: 2007-2011 American Community Survey, Table B17018

Tables and Graphs:

Race and Ethnicity Data

“Although the state’s teen birth rate appears to be slowly decreasing, New Mexico continues to have the second highest rate, especially among Hispanics and Native Americans. Children born to teens are at much greater risk of being trapped in the cycle of family poverty, having poor educational achievement, engaging in criminal behavior, and becoming teen parents themselves.”

New Mexico continues to be a “minority-majority” state, particularly among its young people.

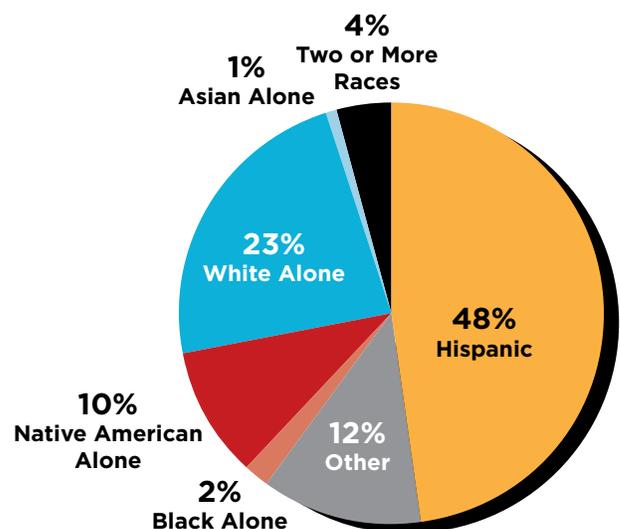

Given the great racial and ethnic diversity of this state, attention must be paid to addressing disparities—in education, employment, living conditions, health, and other key areas—to ensure that all children and their families have equitable opportunities to thrive.

Tables and Graphs:

Health Data

“With insurance coverage, children are more likely to get the preventive visits, immunizations, developmental checks, and care needed to keep them on a positive trajectory of physical, intellectual, and emotional growth. Medicaid, which covers more New Mexico kids than any other health insurer, is of crucial importance to the health of our youth.”

TABLE XX: PERCENT OF CHILDREN (UNDER AGE 18) WITHOUT HEALTH INSURANCE BY COUNTY (2009-2011)

Only 11 states do worse than New Mexico in providing health insurance for their children. Children who are living in low-income families are less likely to have health insurance—unless it is provided by Medicaid. Without health insurance, young children are much less likely to get well-child screenings, preventive care, or even necessary health care.

Note: These data are usually drawn from the most recent U.S. Census, Small Area Health Insurance Estimates, but they were not available at publication time.

| Location | Rate |

Medicaid continues to be the single largest insurance provider for children (covering approximately 46 percent of children) in the state. Without this essential support, nearly half our children would not have health insurance at all.

Note: Data provided are the average number of children or Native American children under 21 served from August 2011 through July 2012.

TABLE XXII: RATE OF BIRTHS TO SINGLE MOTHERS (ALL AGES) BY COUNTY (2011)

| Location | Rate |
|-------------------|------|
| New Mexico | 6.7 |
| Bernalillo County | 5.8 |
| Catron County | 1.6* |
| Chaves County | 7.4 |
| Cibola County | 10.7 |
| Colfax County | 5.8 |
| Curry County | 8.0 |
| De Baca County | 4.5* |
| Doña Ana County | 8.0 |
| Eddy County | 7.3 |
| Grant County | 5.8 |
| Guadalupe County | 5.8 |
| Harding County | 4.3* |
| Hidalgo County | 9.3 |
| Lea County | 8.6 |
| Lincoln County | 5.6 |
| Los Alamos County | 0.5* |
| Luna County | 7.9 |
| McKinley County | 13.1 |
| Mora County | 4.3 |
| Otero County | 5.9 |
| Quay County | 6.8 |
| Rio Arriba County | 9.3 |
| Roosevelt County | 6.1 |
| San Juan County | 8.4 |
| San Miguel County | 6.8 |
| Sandoval County | 5.0 |
| Santa Fe County | 4.5 |
| Sierra County | 4.3 |
| Socorro County | 7.8 |
| Taos County | 6.1 |
| Torrance County | 5.3 |
| Union County | 3.1 |
| Valencia County | 7.0 |

Note: Birth rate is the number of live births per 1,000 persons in the population.

*This count or rate is statistically unstable (Relative Standard Error > 0.3), meaning that it may fluctuate widely across time periods due to random variation (chance), NMDOH-IBIS. Problems with statistical instability tend to occur when there are a small number of health events in a small population.

Source: NM Department of Health, IBIS Database--from NM Birth Certificate Database, Bureau of Vital Records and Health Statistics, for the year 2011 at: <http://ibis.health.state.nm.us/query/result/birth/BirthPopCnty/BirthRate.html>

Although the teen birth rate has improved in New Mexico—much as in the entire U.S.—the state is still ranked 49th in the country. Our teen birth rates continue to be higher among certain race/ethnic groups, such as Hispanics and Native Americans, a disparity that should be addressed. Teen births are of major concern as the children of teen parents—especially if the teen mother is single—are at greater risk of continued poverty, poor educational achievement, and future criminal activity.

Note: Teen birth rate is the number of live births to teens ages 15-19 per 1,000 teens (15-19) in the population.

*This count or rate is either statistically unstable (RSE > 0.3), or extremely unstable (RSE > 0.5) meaning that it may fluctuate widely across time periods due to random variation (chance) and should not be used to infer population risk, NMDOH-IBIS. Problems with statistical instability tend to occur when there are a small number of health events in a small population.

TABLE XXIII: TEEN (AGES 15-19) BIRTH NUMBER AND RATE BY COUNTY (2010-2011)

| Location | 2010 | | 2011 | |

TABLE XXIV: PERCENT OF LOW BIRTH WEIGHT BABIES BY COUNTY (2011)

New Mexico ranks 25th among the states on this indicator—a better performance than on other key KIDS COUNT health measures for children. Low birth weight babies are at higher risk of developmental delays and poor health.

Note: Low Birth Weight (LBW) is defined as infant weight at 1,500 to 2,499 grams.

*Colfax County has the highest rate of LBW infants, though the number of LBW babies born in that county was actually only 28; Hidalgo has the second highest rate, although the actual number was only 10.

Source: NM Department of Health, IBIS Database--from NM Birth Certificate Database, Bureau of Vital Records and Health Statistics, for the year 2011.

| Location | Rate |
|-------------------|-------|
| United States | 9.2% |
| New Mexico | 7.4% |

| Union County | 7.5% |
| Valencia County | 8.2% |

TABLE XXV: INFANT MORTALITY NUMBER AND RATE BY COUNTY (2011)

| Location | Number | Rate |
|-------------------|--------|-------|
| United States | NA | 6.0 |
| New Mexico | 143 | 5.2 |
| Bernalillo County | 45 | 5.4 |
| Chaves County | 5 | 5.4 |
| Cibola County | 3 | 7.6* |
| Curry County | 7 | 7.4 |
| Doña Ana County | 13 | 4.0 |
| Eddy County | 6 | 7.8 |
| Hidalgo County | 1 | 13.2* |
| Lea County | 4 | 3.8 |
| Lincoln County | 1 | 5* |
| Luna County | 1 | 2.8* |
| McKinley County | 11 | 8.4 |
| Mora County | 1 | 22.7* |
| Otero County | 4 | 4.3 |
| Rio Arriba County | 3 | 5.2* |
| San Juan County | 11 | 5.8 |
| San Miguel County | 2 | 6.3* |
| Sandoval County | 1 | 0.6* |
| Santa Fe County | 9 | 6.5 |
| Sierra County | 1 | 11.5* |
| Socorro County | 4 | 16.8 |
| Torrance County | 3 | 17.3* |
| Valencia County | 7 | 7.5 |

Note: The rate is the number of infant mortalities per 1,000 live births.

*IBIS states that the count or rate is extremely unstable (Relative Standard Error > 0.5). The value should not be used to infer population risk. The problem with statistical instability generally occurs when there are a small number of health events in a small population.

HIGH SCHOOL STUDENTS IN NEW MEXICO
SAY THEY USE ILLICIT DRUGS.

26%
USE DRUGS

Methodology

Data Sources: The New Mexico KIDS COUNT program does not design or implement primary research in the state. Instead, the program uses and analyzes secondary data and study findings provided by credible research and data collection institutions both in the state and the nation, such as the U.S. Census Bureau. The New Mexico KIDS COUNT staff make every effort to confirm that the data gathered and used are the most reliable possible. However, we rely on the data collection and analysis skills of those institutions providing this information.

Data Conditions: Some tables in this report do not provide data for all New Mexico counties. In order to provide the most up-to-date information possible we make every effort to utilize the most recent U.S. Census Bureau (generally the American Community Survey, or ACS) data sets. Given this, however, a certain trade-off takes place, as data are not always available in certain time frames for certain geographic areas, like counties, with smaller population sizes. For example, one-year estimates, such as the 2011 ACS provide the most current data available, but are only published for geographic areas with a population of 65,000 or more. ACS three-year estimates (such as 2009-2011) provide data for areas with estimated populations of 20,000 or more, and thus, more New Mexico counties are included in our tables based on these estimates. The five-year estimates provide data for areas with fewer than 20,000 people, because in five years a large enough sample has been accumulated to provide accurate estimates for those areas. The U.S. Census is progressing on a planned schedule to

provide data for all population-size areas, with the projected year of 2013 for providing data estimates for all areas in the U.S.

The data presented in the various tables and graphs in this report are often not comparable to each other. This is due to several factors. These data come from a variety of sources that may use different sample sizes in their research/ data collection methods. Data may also be derived from surveys or questionnaires that apply different definitions to key, measurable terms—such as “family” versus “household” (see below). In addition, statistics, such as percentages or rates, may be calculated for certain populations based on different universes (the total number of units—e.g., individuals, households, businesses—in the population of interest). The universe generally serves as the denominator when a percentage or rate is calculated. A percentage is a measure calculated by taking the number of items in a group possessing a certain quality of interest and dividing by the total number of items in that group, and then multiplying by 100.

Key U.S. Census Definitions to Help in Understanding Certain Tables and Graphs

A **household** includes all the people who occupy or live in a housing unit (apartment, house, mobile home, etc.) as their usual place of residence. A **householder** is the person in whose name the home is owned, bought or rented. Households are classified by the gender of the householder and

the presence of relatives, such as: married-couple family; male householder, no wife present; female householder, no husband present with own children; and the like.

A **family** includes a householder and people living in the same household who are related to that householder by birth, marriage or adoption and regarded as members of his/her family. A family household *may have people **not** related to the householder, but they are **not** included as part of the householder's family in Census tabulations.*

- So, though the number of *family households* equals the number of families, family households may include more members than do families.
- Families are classified as “Married Couple Family,” “Single Parent Family,” “Stepfamily,” or “Subfamily.”

Total income is the sum of the amounts reported separately for wages, salary, commissions, bonuses, or tips; self-employment income from one's own non-farm or farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, or income from estates and trusts; Social Security or Railroad Retirement income; Supplemental Security Income (SSI); any public assistance or welfare payments from the state or local welfare office; retirement, survivor, or disability pensions; and any other sources of income received regularly, such as Veterans' (VA) payments, unemployment compensation, child support, or alimony.

Median income divides households or families evenly in the middle with half of all households/families earning more than the median income and half of all households/families earning less than the median income. The U.S. Census Bureau considers the median income to be lower than the average income, and thus, a more accurate representation.

Poverty level can be a deceptive marker. The Census Bureau uses a set of income thresholds that vary by family size and composition to determine who is poor. If total income for a family or unrelated individual falls below the relevant poverty threshold, then the family or unrelated individual is classified as being “below the poverty level.” However, what is considered the poverty level is generally far below what a family actually needs in order to live at a bare minimum level (i.e., have sufficient food, a place to live, transportation, and health care). For example, the 2012 Federal Poverty Guidelines set a poverty level of \$11,170 for one person; for a family of four, the poverty guide is an income of \$23,050. However, a family of four at double (200 percent) of the Federal Poverty Level (\$46,100) is considered to be low-income, with just enough to cover basic family living expenses.

Major Data Sources

American Community Survey, U.S. Census Bureau

The American Community Survey (ACS) provides annual data on demographic, social, housing, and economic indicators. The ACS samples nearly 3 million addresses each year, resulting in approximately 2 million final interviews. After a broad nationwide data collection test conducted between 2000 and 2004, full implementation of the survey began in 2005, with the exception of group quarters (such as correctional facilities, college dorms, and nursing homes), which were first included in the 2006 ACS. Certain changes on health insurance coverage, veteran's service-connected disability, and marital history, were made to the ACS questionnaire at the beginning of 2008. Each year, the ACS releases data for geographic areas with populations of 65,000 residents or more, and collects a sample over three- and five-year periods to produce estimates for smaller geographic areas. In 2012, one-year estimates (2011) were released, as well as the 2010 three-year estimates (2009-2011) for areas with populations of 20,000 or more, and the 2011 five-year estimates. (The 2007-2011 ACS 5-year estimates are constructed as a period estimate and reflect the average data characteristics over the entire period.) In addition, in 2011, results from the 2010 U.S. Census were made available. Internet address for FactFinder2: <http://factfinder2.census.gov/faces/nav/jsf/pages/index.xhtml>

Bureau of Business and Economic Research, University of New Mexico

The Bureau of Business and Economic Research (BBER) analyzes economic and demographic research related to New Mexico. The BBER also maintains the Data Bank, a library of socioeconomic data, and includes an extensive decennial census collection, along with a wide assortment of other economic and demographic information. Internet address: <http://bber.unm.edu/>

Data Collection Bureau, New Mexico Public Education Department

The Data Collection Bureau gathers data from public school districts throughout New Mexico, such as percentage of students receiving free and reduced-price lunches, student enrollment figures, student-to-teacher ratios, and high school graduation rates. Internet address: <http://www.ped.state.nm.us/IT/schoolFactSheets.html>.

Economic Policy Institute

The Economic Policy Institute (EPI) is a nonprofit, non-partisan organization that produces reports about conditions facing low- and middle-income families in the areas of education, the economy, living standards, and the labor market, publishing the highly respected annual report *The State of Working America*. Internet address: <http://www.epi.org>

Medical Assistance Division, New Mexico Human Services Department

The Medical Assistance Division administers New Mexico's Medicaid and Child Health Insurance Program (CHIP)—New Mexikids. Monthly Medicaid eligibility reports are issued for all children (including Native-American children) by category of eligibility and by county. CHIP eligibility reports are also issued monthly. Internet address: <http://www.hsd.state.nm.us/mad/RMedicaidEligibility.html>

Small Area Health Insurance Estimates, U.S. Census Bureau

The Small Area Health Insurance Estimates (SAHIE) program provides health insurance estimates for all states and counties. At the county level, data are available on health insurance coverage by age, sex, and income. Internet address: <http://www.census.gov/did/www/sahie/>

Small Area Income and Poverty Estimates, U.S. Census Bureau

The Small Area Income and Poverty Estimates (SAIPE) program, conducted by the U.S. Census Bureau with support from other federal agencies, provides selected income and poverty data for states, counties, and school districts. Data are used for the administration of federal programs and allocation of federal funds to localities. Internet address: <http://www.census.gov/did/www/saipe/>

Bureau of Vital Records and Health Statistics, New Mexico Department of Health

The New Mexico Bureau of Vital Records and Health Statistics tabulates vital records data to analyze the health status of New Mexicans. The two major data systems are the files for birth and death. The birth file contains data on demographic characteristics of newborns and their parents. Data on mothers' pregnancy history and medical risk factors are included. The death file contains demographic data on decedents, which are provided by funeral directors, and the causes of death, which are provided by physicians or medical investigators. Internet address: <http://vitalrecordsnm.org//index.shtml>

Epidemiology and Response Division, New Mexico Department of Health

The Epidemiology and Response Division maintains the web-based public health data resource called NM-IBIS (New Mexico's Indicator-Based Information System). This data base provides up-to-date statistics from a variety of state health department divisions, including birth, death, prevalence, and incidence data. There is a health status indicator report section, as well as a direct query section where users can define their specific data requests and get responses in tabular and graph formats. Internet address: <http://ibis.health.state.nm.us/>

U.S. Census Bureau

The federal government implements a national census every decade; the official 2010 Census results were released in 2011. Census data are collected from the entire population rather than a sample that is representative of the entire population (such as the American Community Survey). Census data serve as the basis for redrawing federal congressional districts and state legislative districts under Public Law 94-171. Data from the U.S. Census can be accessed from the same FactFinder2 website as that of the American Community Survey.

OTHER DATA SOURCES

The **Annie E. Casey Foundation** has funded the KIDS COUNT initiative since 1990 and publishes an annual data book highlighting the well-being of children around the country. Using data from the U.S. Census Bureau and National Center for Health Statistics, the Foundation also provides information at its online data center for each state, the District of Columbia, and Puerto Rico, as well as by topic, such as immigration, poverty, education, employment and income. Internet addresses: <http://www.aecf.org> and: <http://datacenter.kidscount.org>.

The **Office of School and Adolescent Health, Health Systems Bureau, New Mexico Department of Health**, publishes the *Adolescent Health Data Report* to provide a comprehensive overview of adolescent health needs and data, as well as the results of the *Youth Risk & Resiliency Survey*, a survey of public high school students (grades 9-12) and public middle school students (grades 6-8) about risk behaviors and resiliency factors. Internet address: <http://www.nmschoolhealth.org/>

The **U.S. Department of Health and Human Services** provides poverty guidelines that are a simplified version of the federal poverty thresholds and are used for determining eligibility for various federal programs. The poverty thresholds are issued by the U.S. Census Bureau to calculate poverty population statistics (e.g., the percentage or number of people living in poverty in a particular area). Internet address: <http://www.hhs.gov>.
