

K-12 Enrollment History and Projections Fall 2014

Key Findings

1. The 2014-15 K-12 enrollment of 25,305 is the highest in more than 30 years and is an increase of 198 students from the 2013-14 K-12 enrollment of 25,107.
2. We project slight enrollment increase over the next five years, leading to a projected enrollment of 26,330 for the 2019-20 K-12 school year enrollment.

This report contains a brief enrollment history on the third Friday in September, the first official enrollment count of the year for MMSD, as well as projected enrollments for the next five academic years.

Projection Methodology

Enrollment projections in MMSD are based on historical enrollment trends and persistence rates from grade to grade. Kindergarten classes are projected by comparing local historical births against kindergarten class sizes to determine what percentage of live births we can expect to enroll in MMSD as kindergarteners. Historical births come from the Wisconsin Department of Health Services (DHS) and are available through 2012.

Projections do not formally take into account future residential developments. Projecting the number of students who will live in a yet-to-be-built building or residential area is extremely difficult to do with any degree of reliability, as it is uncertain when children will move in and where they will come from. New construction does not necessarily mean that MMSD enrollment will increase; instead, students may simply move from other parts of the district. In addition, housing and employment patterns are subject to random and unpredictable variance, so implying that we can make these kinds of projections reliably would be irresponsible. When future large-scale development in an area is relatively certain, this information is used for planning purposes on a case-by-case basis, particularly in conversations around school capacity and long range planning, but we do not adjust projections based on future development.

Projected kindergarteners are assigned to elementary schools based on the current distribution of kindergarteners. Subsequent grades are projected based on historical grade-to-grade persistence rates, with 5th and 8th grade students projected to 6th and 9th grade schools based on the share of 5th and 8th graders from the prior year enrolling at each middle and high school during the current year, respectively. This methodology mirrors best practices across school districts according to a 2013 study of enrollment projection methodology conducted for MMSD by Hanover Research.

K-12 Enrollment History and Forecast

The 2014-15 K-12 enrollment of 25,305 students represents an increase of 198 students from the 2013-14 enrollment of 25,107. K-12 enrollment in MMSD has remained relatively flat for the last five years, increasing by fewer than 1,000 students. We project that MMSD will continue this trend of modest growth for the next five years.

Because birth rates declined from 2007 to 2010, we project that kindergarten classes will decrease in size over the next several years, keeping elementary school enrollments around their current level. However, birth rates began to increase in 2011 and 2012, so that elementary school enrollment is likely to increase in the future. Middle and high school enrollments are likely to continue to increase in the short term as the relatively large current elementary school classes progress through MMSD. In addition to the K-12 students listed above, a total of 1,818 students are enrolled in MMSD 4K programs.

By School and Grade

Projections by school and grade begin on the page 4. These projections use the same methodology as higher-level projections. However, they are subject to a much higher degree of variability because even a small amount of unanticipated mobility or development can change local enrollments significantly. In addition, these projections are less reliable further into the future. Nonetheless, they can help schools establish plans by grade level and observe the likely progression of unusually large or small classes. Due to rounding and the presence of alternative programs, the sum of projections by school and grade for each year will differ slightly from the overall projections presented above. Several schools that had large increases or decreases in their enrollment when compared to the projection we had for the 2014-15 school year are Allis Elementary (15% higher), Lapham Elementary (12% lower), and Badger Rock Middle (12% lower).

Special Education	2921	3075	3213	3357	3501	12%	12%	13%	13%	14%

Over the past five years the number of students identifying as Asian, Hispanic, and multiracial has grown and the percent of students identifying as Hispanic and multiracial has grown. The number of students and the percent of students receiving Special Education, English Language Learners and low-income students has increased over the past five school years. We do not produce projections based on demographic characteristics so we cannot say if these changes are within expectations or if they will continue with any reliability.
